PVI Solar Announces Strategic Partnership with FALA Technologies Inc.

Kingston, NY – June 25, 2009 – Today, PVI Solar announces their strategic partnership with FALA Technologies Inc., a 65 year industry leader in precision equipment building and development of innovative products within the semiconductor, nanotech and renewable energy sectors.

“We are very pleased to announce our exclusive partnership with FALA Technologies”, said David Cohen, CEO and President of PVI Solar. “By aligning PVI Solar’s technology with FALA’s engineering expertise in the semiconductor and nanotechnology space we dramatically expand on our ability to go to market with state of the art off grid lighting and signage applications.”

In addition to FALA Technologies’ proficiency in design and fabrication, they have a strong alliance with The Solar Energy Consortium (www.thesolarec.org) which has provided FALA with immeasurable knowledge of the three critical components of solar technologies – photovoltaic’s, LED’s, and power storage devices. “We are so pleased to partner with PVI Solar to expand our development of advanced solar technology solutions”, said Frank Falatyn, President of FALA Technologies. “We recognize PVI Solar’s technology as the premier solution for sustainable solar applications and FALA is committed to its perpetual research and development to help PVI maintain its competitive advances in the solar arena.”

About PVI Solar -

PVI Solar, the industry leader in solar power management technologies is based in New York’s Mid Hudson Valley, which is quickly emerging as the solar energy capital of the East Coast. PVI Solar is creating advanced solutions for solar power management. Providing a broad range of products, including commercial signage and lighting, PVI’s revolutionary technology sets a direct course to reliable off-grid power solutions.

By combining the immense benefits of solar technology with state-of-the-art energy controls, PVI Solar puts the power in solar energy. Their core technology, PowerLine™ enables PVI to take solar beyond its traditional capabilities. Leveraging decades of experience in the semiconductor and software industries, PVI Solar has developed the foundation necessary to produce renewable, energy efficient products that operate entirely off-grid. Their unique and innovative designs integrate the use of renewable energy into practical applications. For more information, visit www.pvisolar.com.
